TECHNICAL SKILLS

Languages: Python, Node.js, PHP, Java

Frameworks: FastAPI, Django, Django-Ninja, Flask, Express.js, Vue.js

Cloud & DevOps: AWS Lambda, AWS SQS, AWS SNS, AWS EventBridge, AWS CDK, AWS AppFlow, AWS Step Functions, AWS DynamoDB, AWS S3, Docker, Kubernetes, GitHub Actions, Coolify

Observability: AWS CloudWatch, Datadog

Databases: PostgreSQL, MySQL, Neo4j, MongoDB, Snowflake, RabbitMQ, Redis

Fintech APIs: Plaid, Salesforce, Socure, Encompass, Twilio

Commerce & Trading APIs: Shopify, InteractiveBrokers, Polygon, TradingView, FedEx, DHL, UPS

Testing & Tools: Pytest, Moto, LocalStack, MinIO, Selenium, RQ, Cryptography

EXPERIENCE

Quantum Lending Solutions

Reston, Virginia, United States

Software Engineer

February 2024 – Present

- Building and maintaining financial core services across loan origination, fraud detection, cashflow analysis, and payment processing (Plaid, MoneyThumb, HyperVerge) — serving ~14K loan applications/month (~\$32M disbursed monthly) using Python, FastAPI, and Django-Ninja on AWS.
- Built an in-house graph-based fraud detection service using Neo4j to surface connected fraudulent applications across shared attributes (email, SSN, EIN, IPs) — integrating PostgreSQL, MySQL, and Snowflake with graph-visual PDF reports via FastAPI, meaningfully reducing manual fraud review overhead.
- Optimized Cypher queries for edge-case fraud graph traversals, cutting execution time by 99% (~11 min to ~480ms).
- Built a Plaid-powered payment processor microservice integrated with the legacy Back Office system, reducing overdue portfolio by 20–30%.
- Designed an event-driven architecture using RabbitMQ, AWS SQS/SNS, and Kubernetes, improving system throughput and decoupling 15+ platform services.
- Automated Salesforce data ingestion via AWS AppFlow, eliminating manual data transfers and saving the ops team ~5 hours/week.
- Optimized API endpoints and SQL queries, reducing response latency by 99% (~15 min to ~600ms) across core platform services.
- Built a FastAPI service that automatically runs 6 bank-statement validation checks (data coverage, name/address match, balance continuity, revenue consistency) via SNS triggers — replacing manual pre-underwriter review, publishing a downstream readiness event, and exposing results via REST API.
- Led code reviews across the platform team, enforcing design patterns that meaningfully reduced production regression incidents.
- Raised test coverage across platform services from 30% to 90%+ using Pytest and Moto, reducing production regressions.

Camino Financial

Los Angeles, California, United States

Software Engineer

February 2023 – February 2024

- Maintained and extended the legacy Django Back Office system for the Credit team, shipping features and resolving bugs that meaningfully unblocked loan processing workflows.
- Designed and implemented an event-driven architecture using AWS EventBridge and CDK, decoupling platform services and meaningfully improving system reliability.
- Shipped financial core microservices for Plaid and Socure integrations, lead management, and Salesforce sync — enabling automated fraud score routing to Salesforce lead objects via AWS EventBridge.
- Improved microservices observability using AWS Powertools, reducing root cause identification time from 3–4 hours to 30–45 minutes per incident.

- Delivered a serverless pipeline via AWS Lambda, Step Functions, and EventBridge that processes CSV files to generate targeted Plaid-linked campaign URLs — enabling the marketing team to launch their first automated loan campaigns.

Globant

Software Engineer

Barranquilla, Atlántico, Colombia

May 2022 – January 2023

- Shipped a Python/FastAPI microservice for a staffing-tech client that evaluates ML model outputs through a decisioning tree, returning human-readable candidate-to-job compatibility explanations at scale.

Leanware

Software Engineer

Barranquilla, Atlántico, Colombia

August 2021 – April 2022

- Built a PDF generation web app that batch-processes CSV input to populate document templates using Node.js on GCP, saving users ~2 hours per batch.
- Shipped a secure file hosting service for sensitive customer documents with end-to-end encryption using AWS KMS, Python, Flask, and AWS Serverless — eliminating reliance on third-party storage for regulated data.
- Shipped a near real-time algorithmic trading bot with 4 custom strategies — integrating Polygon, InteractiveBrokers, and TradingView webhooks for signal processing and order execution at ~650ms per signal using Python and AWS Serverless.

ISWE GROUP

Software Engineer

Buenos Aires Province, Argentina

June 2020 – April 2022

- Built a web scraper that automates FDA Priority Notice webform submissions using Python, Selenium, and RQ — increasing throughput from 1 to 4 submissions per 15 minutes and freeing staff to focus on order processing.
- Shipped a vehicle broker prototype enabling real-time insurance quote generation by integrating Argentinian SOAP insurance APIs using Python, Flask, Vue.js, and PostgreSQL.
- Shipped an inventory management system integrated with Shopify for product tracking and order fulfillment, generating shipping labels via FedEx, DHL, and UPS APIs — scaling order processing from 10 to 40+ orders/day using Python, Flask, Vue.js, and MongoDB.
- Extended the inventory management system with multi-store support, enabling creation and management of Shopify store clusters.

City Lending Inc

Back End Developer

Barranquilla, Atlántico, Colombia

October 2019 – May 2020

- Automated loan processing and status update workflows for the financial team via Encompass API integration using Python and AWS Serverless — eliminating manual status tracking.
- Shipped internal loan officer tooling and REST API integrations with the Encompass API using Python, PHP, and AWS Serverless — streamlining daily workflows for the originations team.
- Shipped a custom Salesforce Lightning chat component integrated with Twilio — used by all loan officers for lead follow-up, with automated assignment, lead sanitization, and data visualization dashboards using Apex, Node.js, and AWS Serverless.

EDUCATION

Universidad del Norte

Bachelor of Engineering - BE, Computer Science

January 2016 – February 2021
